

## Blood collection tube

# AMPULAB™

### Features and Benefits

- Preservative reagent stabilizes nucleated blood cells and prevents the release of cellular gDNA and the degradation of cfDNA.
- K3 EDTA prevents blood coagulation.
- Convenient storage (Room temperature)
- Plastic tube (polyethylene terephthalate ,PET) to prevent breakage during transport and sample centrifugation.
- Packed in a special pouch to increase stability and effectiveness.
- Wide range of applications for cfDNA analysis after blood collection.

### Quality

Manufactured in accordance with CE and ISO 13485
